Permanent Hair Reduction
With "Smooth Flow" 10P Technology**

The Cheveux laser system safely works to remove unwanted hair for all skin colors on all parts of the body!

The Cheveux laser system by:
Sandstone Medical Technologies, LLC

Diode Laser Technology Advances

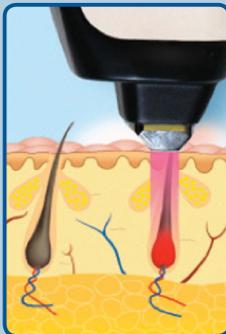

For years laser technologies have tried to safely destroy the follicle of unwanted body hair for people of all skin colors. The Cheveux Diode laser system by Sandstone Medical Technologies, now offers a safe, effective and virtually painless permanent hair reduction treatment. Today men and women of all colors can experience freedom from daily routines of removing unsightly hair!

How Laser Hair Removal Works

At all times your body hair is going through three distinct phases: active growth, regression and resting. The Cheveux laser system works by emitting a long wavelength of focused light-energy. This energy is absorbed directly into the melanin inside the hair shaft. When the hair is treated during an active growth stage, the light-energy will cause a disabling of the hair re-growth mechanisms. Within seven to ten days after each treatment session, the hairs that were treated during the active growth stage will begin to shed. Significantly less hair will grow back with each treatment. Over time most patients will notice the treatment area to be more smooth. The Cheveux laser system will help you achieve your ultimate goal of permanent hair reduction.

About “Smooth Flow” 10P Technology

Exclusive to the Cheveux laser system, “Smooth Flow” brings a level of comfort that has never been experienced before with laser treatments. Without compromising treatment outcomes, “Smooth Flow” causes the light-energy to gradually be absorbed directly into the hair follicle without causing injury to the surrounding tissue. This offers a huge advantage to darker skin colors!

Are Cheveux treatments right for my skin type?

The Cheveux laser system has been precisely fitted with versatile yet very specific operation modes that your treatment provider can choose from to safely remove many textures and colors of hair from all skin tones.

Schedule a personalized consultation today for more information.

Are there any side effects?

The treated area may be slightly pink and tender to the touch but there is no downtime following the treatment and patients should be able to return to daily activities right away.

How many treatments will I need?

The actual number of treatments will depend on the genetic variants of the hair growth cycle of each individual person, but on average most areas will require 3-6 treatments.

After the treatment, how will I need to take care of my skin?

An SPF 30 sunscreen will need to be applied to protect the treated area from any skin discolorization and it is highly recommended that you do not pluck, pull or wax hairs you see in the treated area, as this will initiate a regrowth phase in the hair follicle.

How much do treatments cost?

Costs will vary depending on the size of the area being treated and the amount of treatments required. Schedule a consultation today with your treatment provider for more details.

What do Cheveux treatments feel like?

It depends on what mode of operation the physician chooses for the treatment session. If the exclusive “Smooth Flow” mode is chosen, patients will feel gentle heating sensation moving over the skin that will cause a thermal reconditioning shut-down of the unwanted hair growth. Patients have reported the “Smooth Flow” mode feeling like a hot stone massage. If a slower, higher energy pulse mode is chosen, the patient may feel a slight stinging sensation similar to a rubber band snap on the skin. Treatments with the Cheveux laser system have been designed to be gentle and virtually painless for all patients.

Can any area of the body be treated?

Yes, the Cheveux is designed to comfortably remove hair on all areas of the body, even in the most sensitive places like the bikini area, nipples and tummy.
